

Enabling Existing Customers vs New Registrations

To support both existing account holders (auto-assigning website accounts) and new users:

1. Login form for existing users:

- Will enter **Account Number + username +email**
- Match the account number to your software's customer database or list.
- On successful match, provision a website account automatically with proper permissions.(we can let him with email and password whatever pattern we follow and send him on email)

2. Separate registration flow for new users:

- Ask for required details -account form will be build (see existing website account application form-
https://na2.documents.adobe.com/public/esignWidget?wid=CBFCIBAA3AAABLblqZhDBJV9amnGHoIC9IPxHKlv2Nr1bYRnuu2GMvf-mPMtikKM5iCK8ZbPH0iw6xMw30Os*)
- Create a new account , once submit this will be added to our system
- And then he will follow the same login procedure since now he will have account number assigned by our backend system after completing form

Account list is preferred or integration is better??? Coz everytime we have to update list since everytime in login process this will check against the backend file of accounts number
